

## **HB803A-100 High-Flow Vapor Recovery Adaptor – Safe Bottom-Side Vapor Recovery Solution for Tank Trucks**

HB803A-100 Vapor Recovery Adaptor is designed to minimize pressure drop and maximize the efficiency of the recovery of petroleum vapors during tanker loading and unloading, our Vapor Recovery Adaptor is internationally regarded as the benchmark. Our Vapor Recovery Adaptors incorporate a lightweight aluminum construction for increased payload and reduced maintenance. Multi-compartment loading at high flow rates with vapor return is possible without exceeding P/V vent pressure ratings.

### **Function & Feature**

4" TTMA Flange x male cam & groove adapter

High flow capacity and low pressure drop

Multi-compartment loading at high flow rates with vapour return is possible without exceeding PV vent pressure ratings

Sight glass visually alerts personnel of liquid contamination

Reduced risk of vapour loss from back pressure of vapour

Viton seals fitted as standard

Lightweight aluminium construction for increased payloads

Screw plug fitted to drain liquid from adaptor
