

HBXYQ-NL Nylon Fuel Predictor for Petrol Tank Truck

HBXYQ-NL Nylon Fuel Predictor and HBXYQ-AL Aluminum Fuel Predictor are typically installed beside the bottom unloading valve of the petrol tank truck to indicate the name of the oil product being unloaded, thus preventing mixing of different oil products due to operational errors. The internal drum has eight sides for attaching labels with the names of eight different oil products. Each side of the drum has a detent, allowing the oil product name to be switched by rotating the adjacent manual ratchet without displacement. Made of nylon or aluminum material overall, the structure is lightweight and easy
