

HBSYWG-100 Series of Gravity Drop Top-seal Delivery Elbows

Delivery elbow is a crucial connecting component when the oil tank truck unloads fuel into the underground tank at the gas station. Its bottom is equipped with a female end fitting which called as roller-cam design, allowing it to be clamped onto the brass male end fitting inside the spill container. With a quick-connect structure, it is easy to assemble and disassemble, providing convenience in usage.
