## High-Compatibility Fuel and AdBlue Flow Indicator (Carbon Steel / 304 Stainless Steel / Aluminum)

The fuel dispenser sight glass is a high-quality pipe fitting accessory, typically installed on the side panel of fuel dispensers. It allows for a clear view of the fuel flow status. With a clever structural design, the inlet connects to the pipe coming from the dispenser's internal flowmeter or solenoid valve, while the outlet connects to the external hose fitting, forming a right-angle structure. A transparent glass window is integrated at the right-angle point, enabling visual monitoring of the oil circuit.
